Welcome, bienvenue, bienvenido to Ratman. Thank you for booking your trip with IrmaSpace Tours, my name is Gandhi and I am your guide, I will take you on a journey through our beloved metropolis and introduce you to the most exhilarating video game ever devised - VITAL LIGHT.

Ramron cannot be found on any maps. It is neither an underworld, nor is it an upper world, Ramron is an inner world. Ramron is the City of Video Games, a city that is living and that is constantly changing. Ramron exists inside your computer, behind your screen and it comes to life every time you turn off your machine.

Now, please fasten your seatbelts as our tour begins.. And as you can see on the horizon, our city is made up of towering skyscrapers. Each of them is populated by the persons who inhabitant each game.. At this moment, we are passing through the oldest quarter of the city. Some of the towers in your left are almost fifteen years old! If you look closely, you will see that some of the buildings here are in poor repair and some are in a state of collapse. Lights are at very few of the windows indicating that these games are rarely played nowadays. Over their doors you may be able to make out the names of old games you used to play.

And over that hill, beyond the towers, you can see the newer shoppers being constructed in the more modern areas. These are the games that are being designed and will be played in the future.

But enough of gossip for now. We have now turned right and are heading straight down Fire Button Boulevard. At the end of this long avenue, you will see the crowning glory of Ramron. The tallest tower in our city is a testament to the greatest game of all. This tower is home to the sprites of the fastest most challenging, the best arcade game ever invented - that game is VITAL LIGHT.

Many characters live inside this tower - but their lives are a mystery to all citizens of Ramron. Even I, your guide, do not know the enigmas that lie within. But now, as we slow down, you can see the great doors of this tower open to welcome you inside.

For those who are brave enough, you may unbuckle your seatbelts and enter the tower to play VITAL LIGHT. If you succeed, you will discover the secrets of those who live inside the tower, if you fail, you will join the massed ranks of the defeated.

For those who do not fancy the challenge, you must move quickly away from here. Meanwhile, my job is not yet done. For those brave enough to enter the tower of VITAL LIGHT, I will continue to be your guide.

Welcome, willkommen, bienvenida. So, I see there are a few less of our party. Well, here we are inside the huge glass atrium of the Skyscraper. It has been designed by the finest computers and constructed using only the best quality building materials.

Now, as you can see, there are seven lifts to choose from. Each of them will take you to a different floor of the building. Unfortunately I don't know which floor they do not like to travel in lifts, so I suggest you try this one first. Inside their games are numbered according to their level. Each floor is populated by different sprites. Some are friendly, some are evil, some like type, some like to run away. Some are big, some are small, some like to fly, some like to swim, some like to hop, some like to crawl, some like to sit still and some like to move around a lot. Some are very clever, some are very stupid, some are very fast, some are very slow. Some are very pretty, some are very ugly. Some are very dangerous, some are very friendly. Some are very big, some are very small.
